

GOSIM Paris 2026

May 5-6, 2026 Station F, Paris

Artemis: The Optimization Platform for Evolving Critical Software

Dr Mike Basios, CTO and Co-Founder of Turintech AI

Mike Basios
CTO & Co-founder,
TurinTech AI

CONTENTS

GOSIM Paris 2026

Part 01

What is Artemis?

Part 02

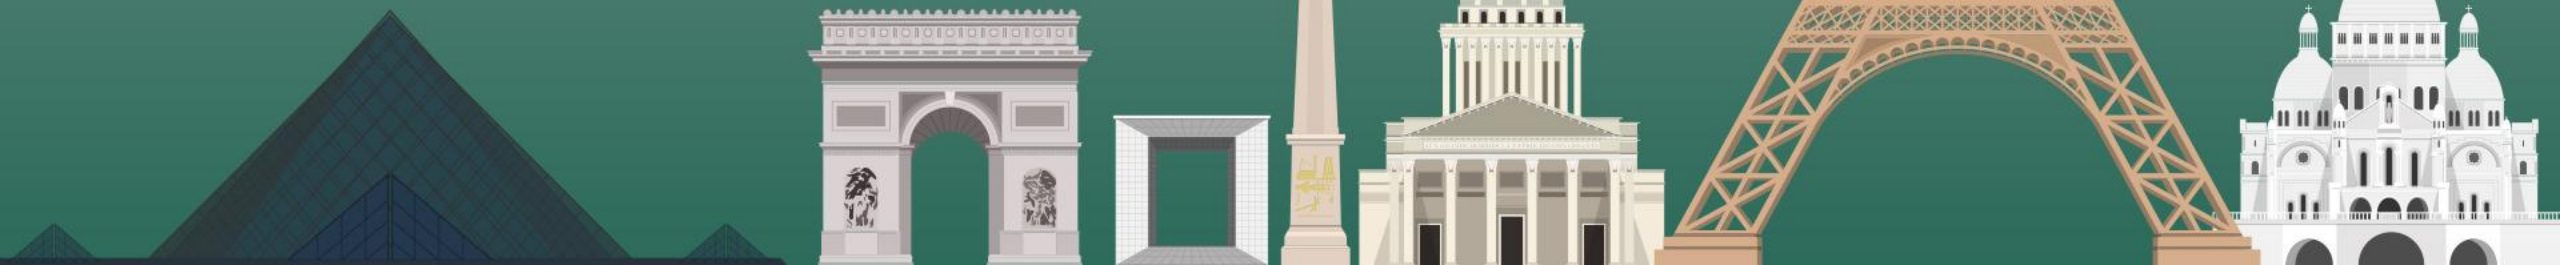

How Artemis can evolve software with AI?

Part 03

Real World Optimisation Use Cases

Part 04

Contact Info

01 Artemis

Artemis Continuously Optimizes Software Systems

If it runs in code and can be measured, Artemis can optimize it.

Code Optimization

Runtime, memory, throughput, latency, efficiency

AI Infrastructure & Inference Optimization

vLLM, Triton, runtimes, agents, inference stacks

Algorithm Optimization

Accuracy, convergence, scheduling, ops

Modernization & Refactoring

Legacy upgrades, migration, debt reduction

Validation & Governance

Benchmarking, testing, scoring, validation

1 AI INFERENCE

vLLM + Qwen3-8B-AWQ

AMD EPYC server

+70%

throughput uplift on the optimized inference path.

2 AI INFERENCE

OpenVINO MVN kernel

Intel Arc 140V

+20% / -8%

faster MVN kernel; end-to-end latency cut by 8%.

3 INFERENCE RUNTIME

LLaMA.cpp

Quantized local inference

Hot-path speedups

measurable gains in tokenizer and decode loops.

4 FINANCIAL PRODUCTS

QuantLib (C++)

Pricing & risk library

+32.7%

faster runtime on representative pricing workloads.

5 SUPPLY CHAIN · VRP

Java VRP

Vehicle routing solver

~2%

Pareto improvement across van-time and orders served.

→ THE PATTERN

Same agent, very different stacks.

C++ · Java · Python · CUDA / OpenVINO kernels

One workflow

plan → patch → benchmark — verified against the team's own tests.

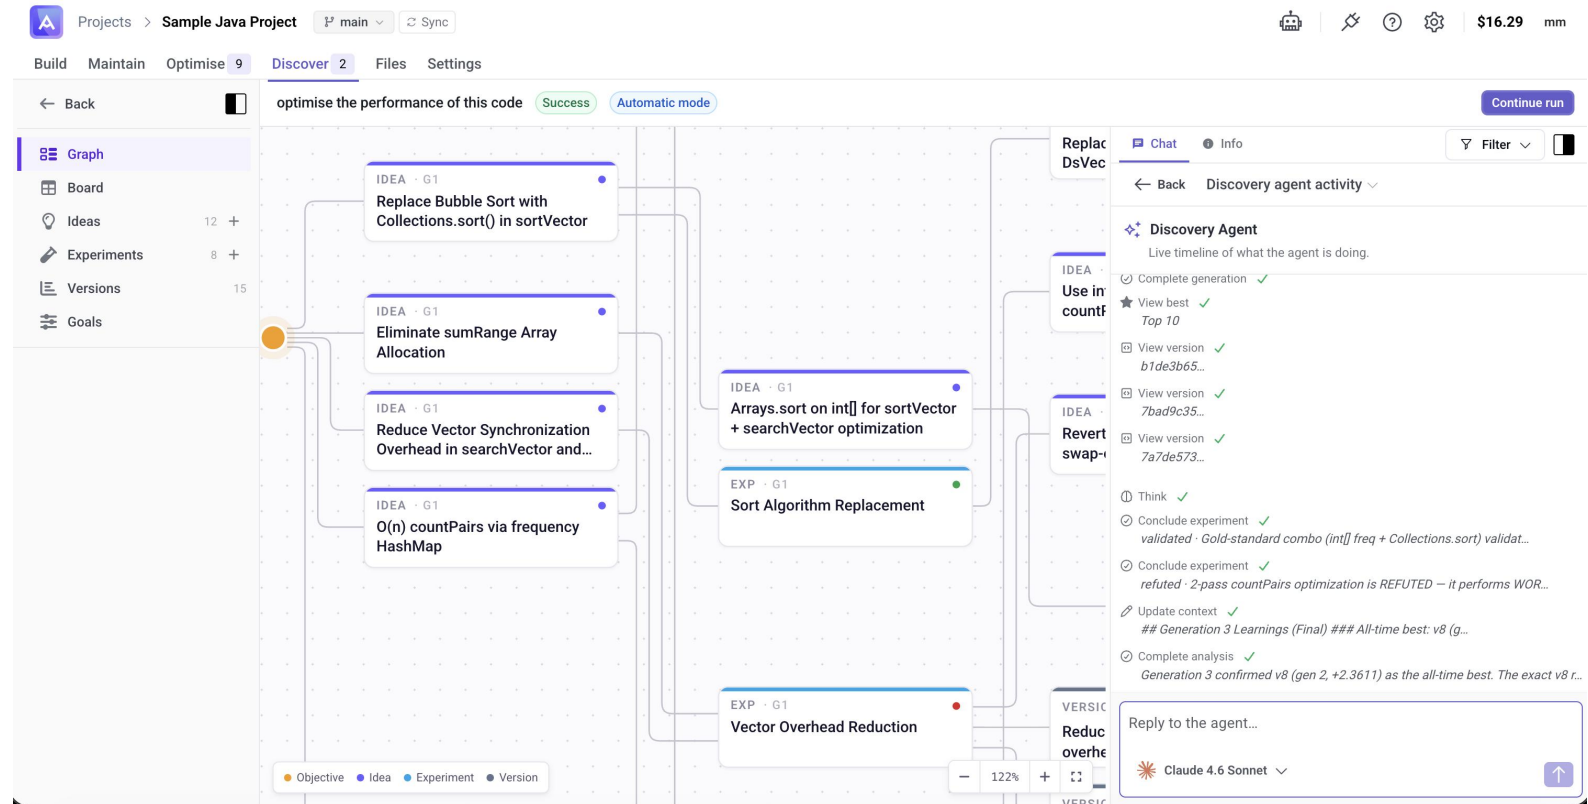

GOSIM PARIS 2026 · 02

• Artemis · TurinTech
AI

Artemis combines:

- AI agents
- Evolutionary optimization
- Benchmarking & validation
- Hardware-aware execution
- Continuous optimization
- ... into a single engineering platform.

Thanks!
