

Fraser Edwards

CEO & co-founder @  cheqd

Fraser Edwards | CEO & co-founder

Fraser Fraser has deep delivery and self-sovereign identity knowledge through leading the Known Traveller Digital Identity project with the World Economic Forum and Dutch and Canadian governments, and separately, blockchain payments expertise through architecting cross-blockchain payments on the Jasper-Ubin project with the Singaporean and Canadian Central banks. He is now focusing on agentic identity, governance, and compliance, building integrations with AI ecosystems and developing the trust infrastructure needed for autonomous agents to operate in regulated environments.

cheqd provides trust infrastructure for digital identity: enabling organisations to issue, verify, and monetise verifiable credentials at scale. Its public, permissionless network powers verifiable data ecosystems for enterprises including Telefonica, GSMA, and underpins emerging use cases in agentic identity, where autonomous AI agents require verified, auditable credentials to operate across complex workflows.
