

Agentic AI Systems: From Tools to Organizations

Hao LI

Founder, HAOEASY AI SAS

Paris

CONTENTS

GOSIM Paris 2026

Part 01

From Software Tools to Digital Coworkers

Part 02

Why Enterprise Adoption is Still Hard

Part 03

The Next Enterprise Operating Model

From Enterprise Operator to Founder

Operator turned Founder

- 🏢 AI Leadership: IBM, Sodexo, Capgemini Invent
- 📈 Strategic Advisor for CAC40 Enterprises
- 🚀 Building AI Native Organization Platform (AIONOS)

PART

01

The Industry Shift

From software interfaces to Digital
Coworkers

The Evolution of Interaction

🖱️ Today: Manual SaaS

Interface-driven

Humans operate software. Complexity is hidden behind dashboards, requiring manual clicks, human orchestration, and constant context switching.

Traditional Tools → User Operated

⚡ Tomorrow: AI Agents

Outcome-driven

Humans lead coworkers. AI agents reason, plan, and execute workflows autonomously, leaving humans to focus on intent and strategic oversight.

Autonomous Coworkers → Managed by Humans

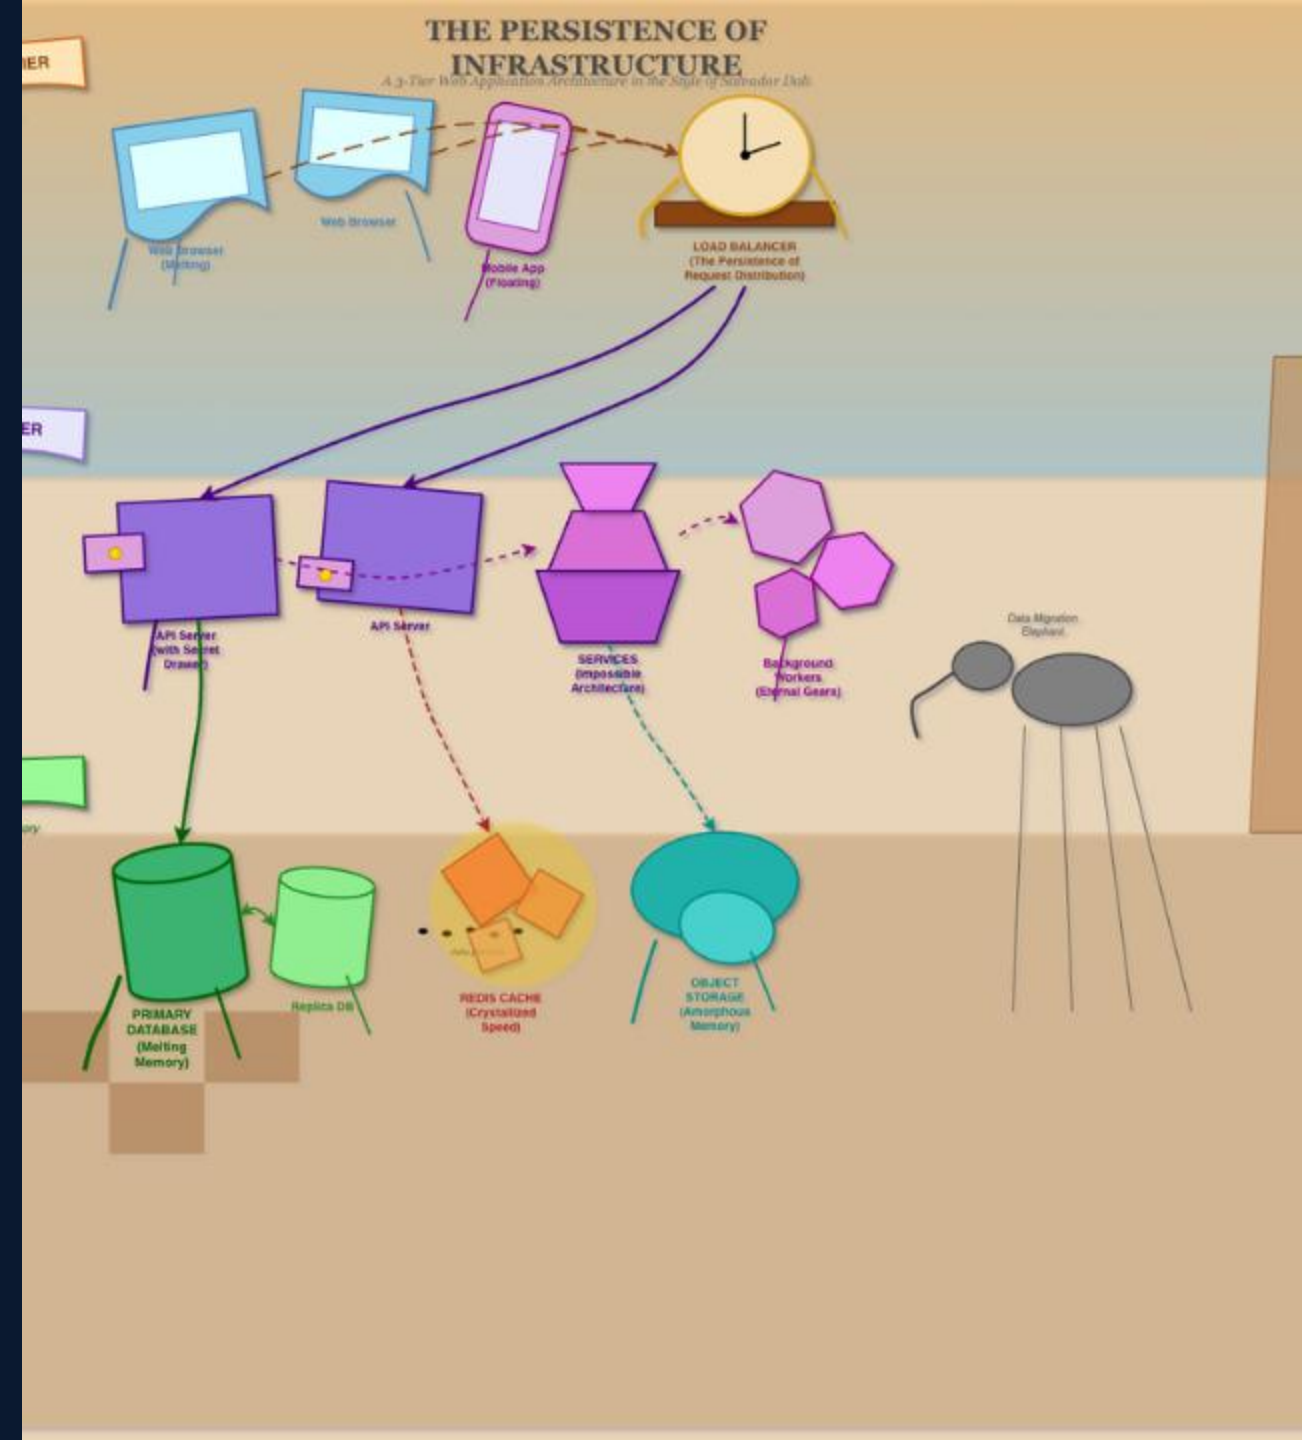

"Enterprise AI is moving from tools people use to coworkers people manage. This shift requires a fundamentally different technical architecture."

Rewiring the Stack

AI Execution Layer

Agents will not replace all software; they will become the intelligent execution layer above ERP, CRM, and databases.

Systems of Record remain essential.
Interfaces become thinner.

PART 02

The Adoption Gap

Why Enterprise Adoption is Still Hard

Operational Control is the Bottleneck

Trust

Can we rely on AI output for mission-critical tasks?

Governance

Who approved the agent's action and why?

Workflows

How do we redesign roles for human-AI teams?

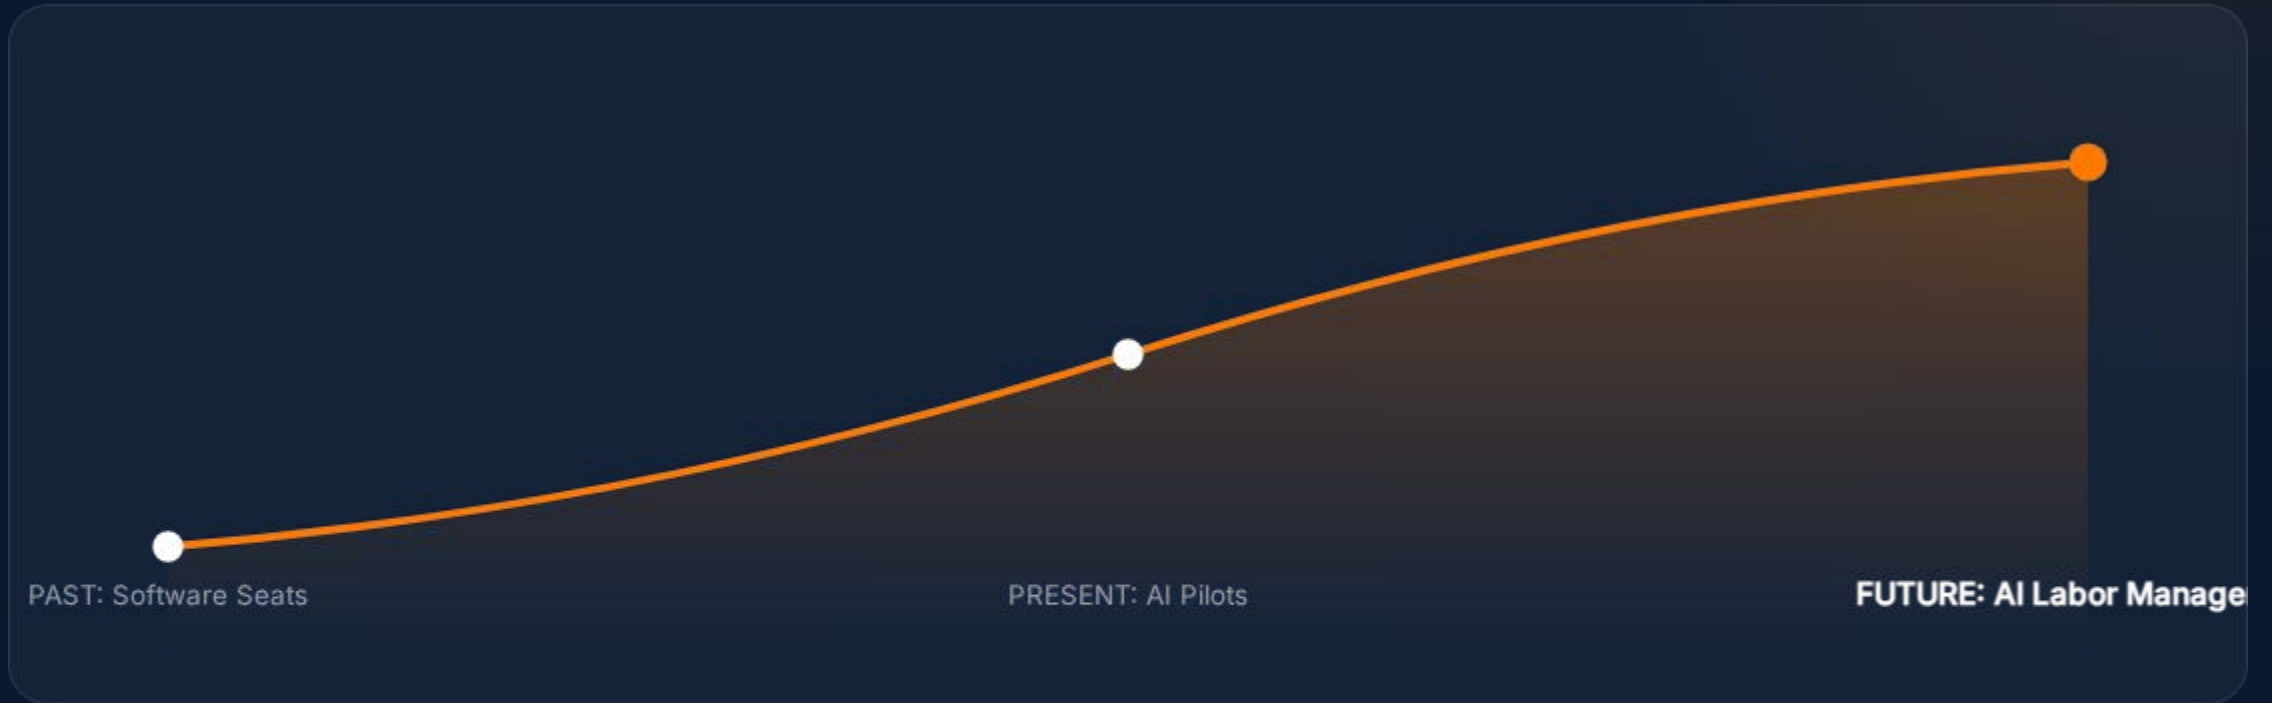

Technology evolves quickly. **Organizations evolve slowly.**

PART 03

AI Team Coworkers

The Next Enterprise Operating Model

The New Software Layer

The next category is the operating layer for AI work.

The Control Plane for AI Labor

Human Supervision

Managers, Approvals,
Escalation Rules

Agent Teams

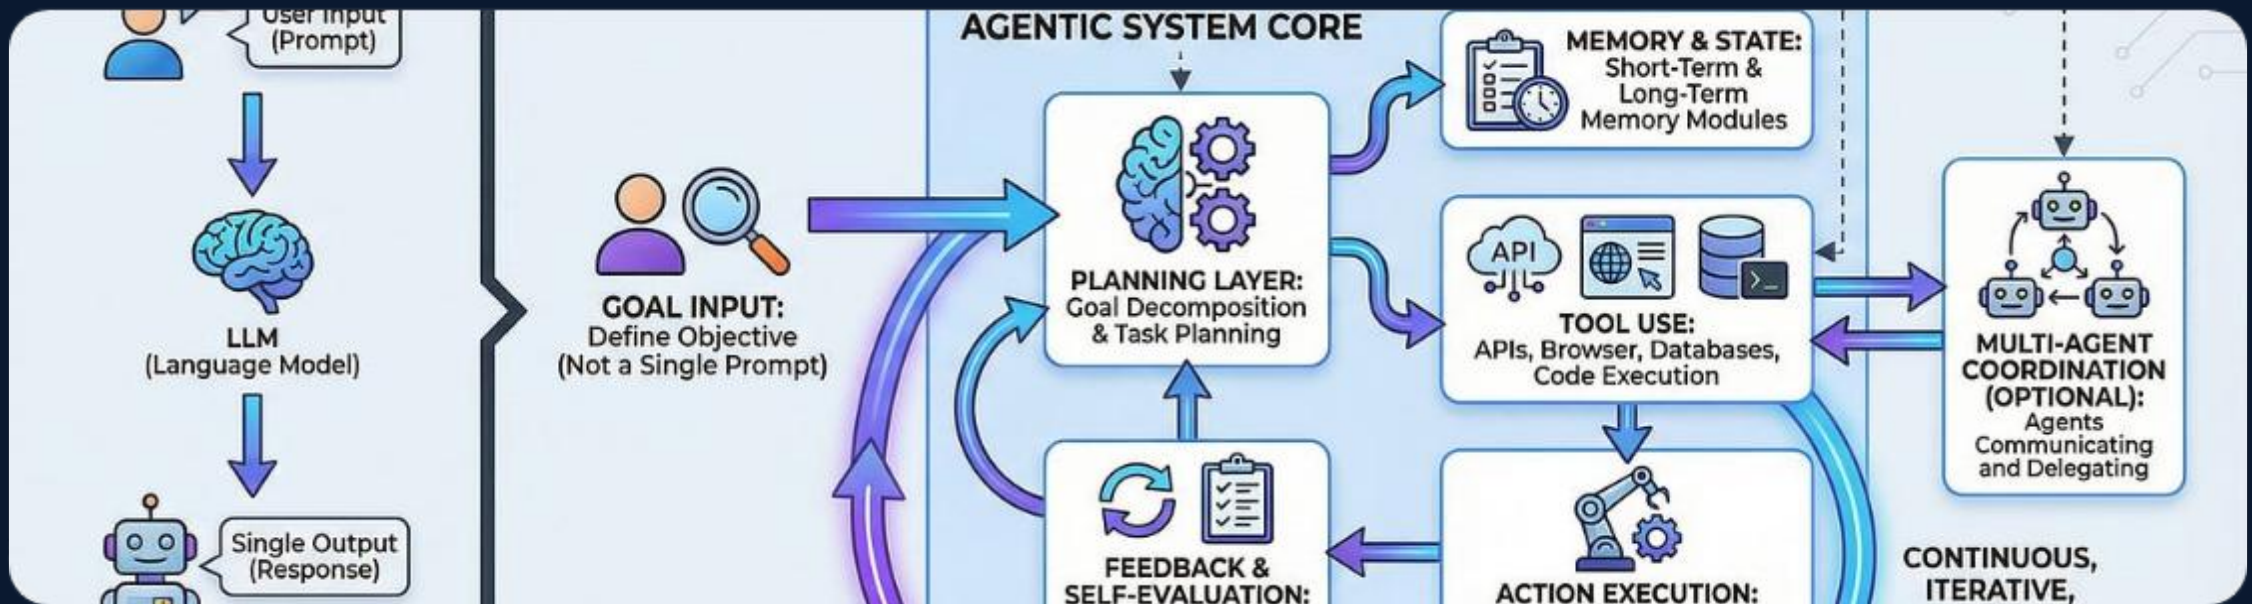

Specialized Agents (Sales,
Analyst, Op)

Workflow & Memory

Routing, Context Sharing, SLA
Tracking

Enterprise Stack

Connectors for CRM, ERP,
Slack, Finance

THE FUTURE OF AI IS NOT ONLY INTELLIGENT AGENTS

Intelligent Organizations

AIONOS : *A single AI agent is a productivity tool. An organized
AI workforce is enterprise transformation.*
