Showing You(r) Work in the Era of AI

“[This technology] would destroy all motivation for learning the basic facts.”

“If [it] is allowed in schools, students will no longer see any need for basic skills.”

“Introducing [it] in schools will convince many students that [this technology] is a magic box that can be used as a substitute for understanding.”

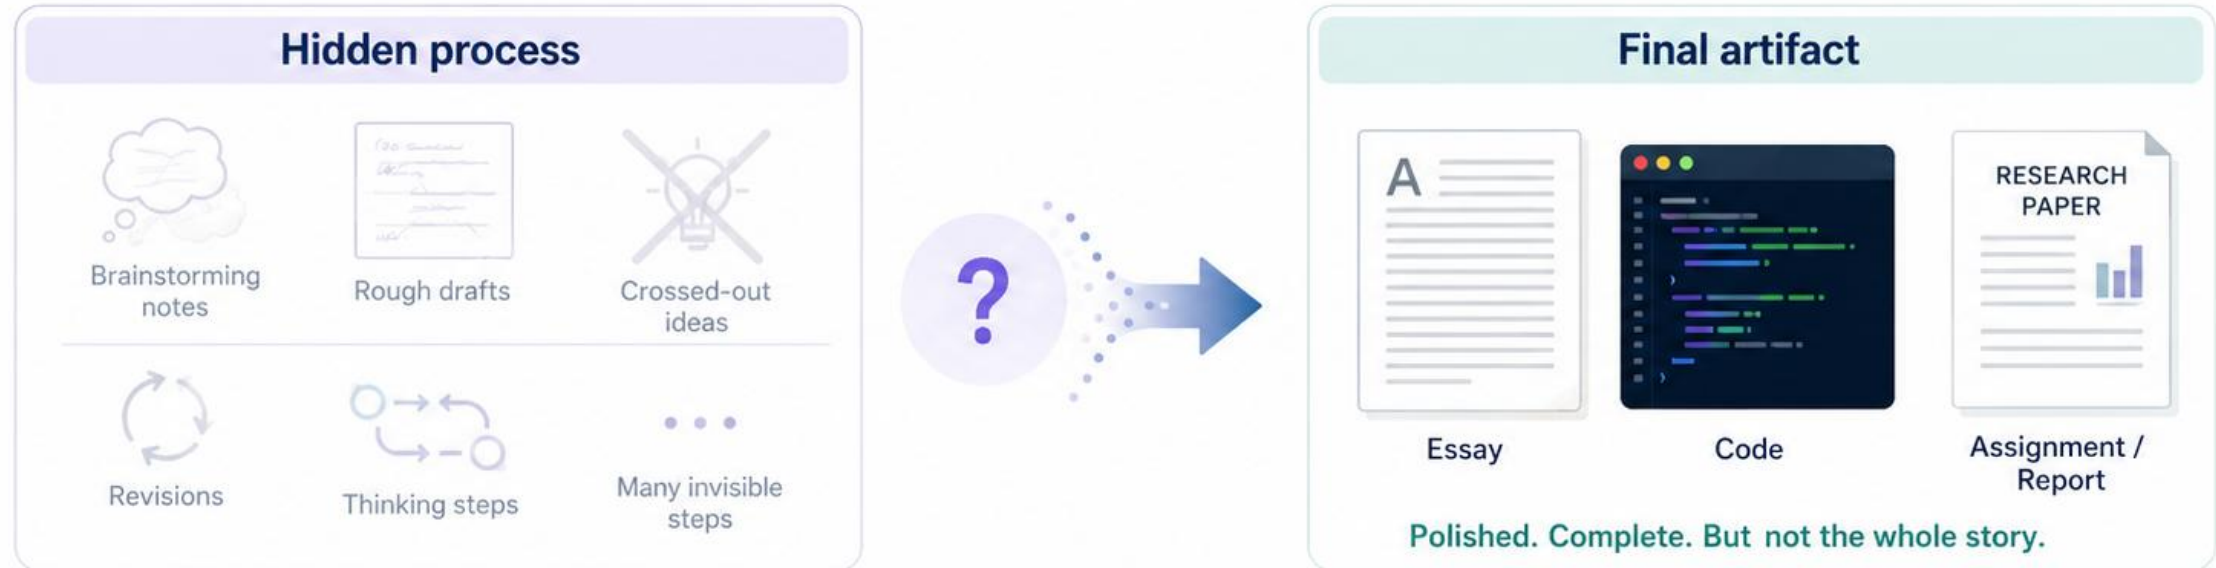

First Handheld Calculator
HP-35, 1972

The final artifact is losing signal

Essay $\neq$
understanding

Answer $\neq$
reasoning

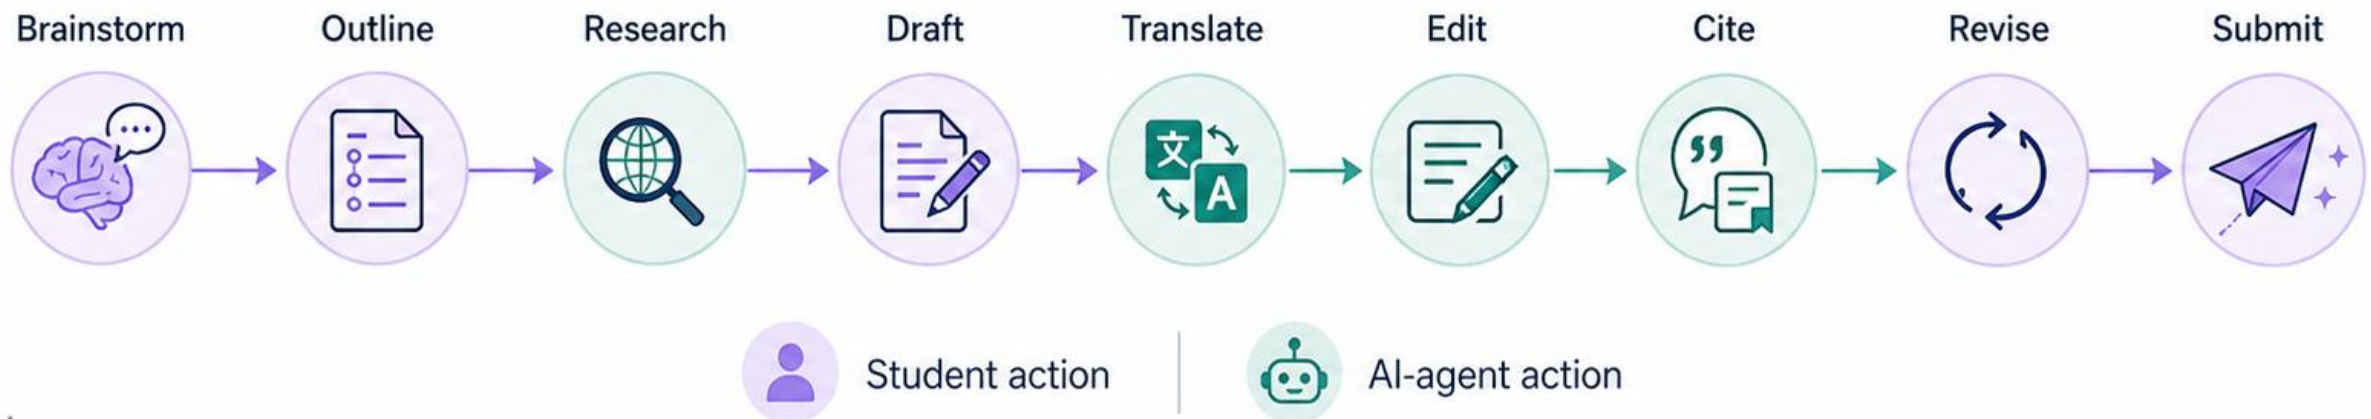

Polish $\neq$
judgment

Finished outputs can look right—while the learning is missing.

One submission. **Many invisible interventions.**

Where was
the **student** thinking?

Where was
the **agent** acting?

From calculators to agents

Survey of 2,000 higher-ed students (2025)

87%

of students use AI for school

VS.

18%

feel 'very prepared' to use
AI professionally after graduation

Usage is widespread.
Professional confidence is **not**.

Source: Grammarly / Talker Research survey of 2,000 higher-ed students, 2025.

The question has changed

Old question:

How do we stop students from using AI?

VS.

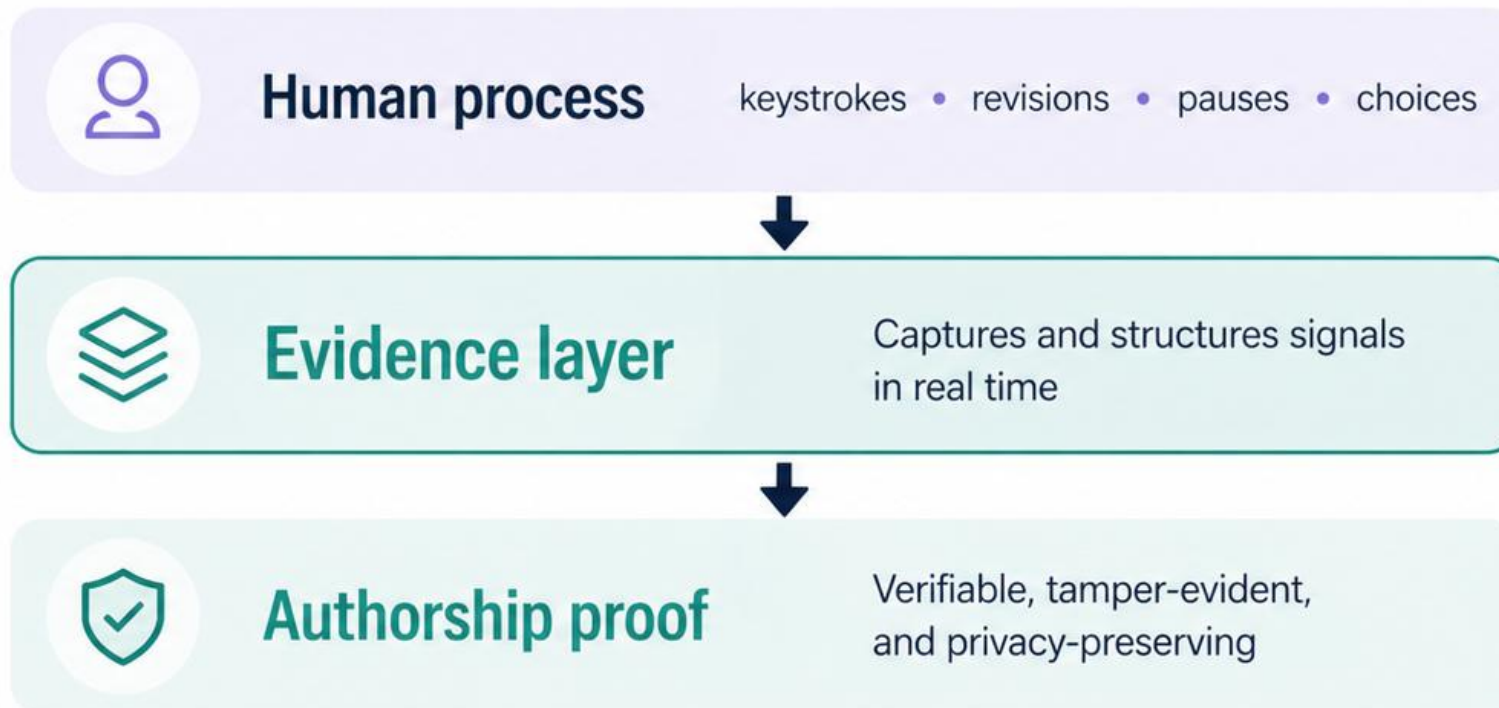

Better question:

How do we teach students to use AI while proving **what they understand, intended, and contributed?**

Puddin: an evidence layer for human authorship

From process signals to **verifiable proof**.

**The future of education
is not about proving
AI was absent.**

**It is about proving
where the
human was present.**

Thank you.
