

Alignment is a closure argument, not a vertex.

Three disciplines, three conditions, one conjunction.

Each condition is the joint output of a pair of disciplines. Edges carry the argument.

Verifiability without legitimacy	Lab-internal evaluations with no external standing.
Legitimacy without enforceability	Voluntary codes signed with ceremony, no operational force.
Enforceability without verifiability	Regulation imposing obligations on capabilities no one can measure.

Open infrastructure is a Triad entailment.

Two arguments — one structural, one empirical.

Verifiability that lives only inside the developer fails the legitimacy test by construction. Enforceability without a public technical substrate is theatre. *Open evaluation infrastructure is what the Triad demands once the closure argument is taken seriously.*

WHY OPEN

STRUCTURAL

An interpretability finding or eval result without independent reproducibility is **advocacy, not evidence**. Regulators cannot cite what they cannot inspect; CEN-CENELEC JTC 21 and ISO/IEC SC 42 cannot codify what is not on the public record.

EMPIRICAL

Open-weight models can have safety guardrails removed by fine-tuning at near-zero cost. Most red-teaming is done in English on US-trained systems — the verifiability gap maps onto a legitimacy gap, since affected publics are **non-Anglophone**.

WHAT NICER IS BUILDING

- i **Open-source agentic alignment testbed**
Reference environment for pre-deployment assessment. Year-1 deliverable.
- ii **Public Spec-vs-Behaviour audits**
Quarterly reports cross-referencing published model specs against observed behaviour.
- iii **Inspect-modelled public eval infrastructure**
Eval code, fixtures, and protocols on the public record by default — not by exception.
- iv **Forward-deployed researchers**
Embedded in regulators, AI Offices, and standards bodies. Findings into binding instruments.

The proposition: open infrastructure in AI safety is not an aesthetic commitment. It is the operational entailment of taking verifiability and legitimacy together.
