MiniMax From Day 1

MiniMax
Day 1

Our Mission
Intelligence with Everyone

Our Vision
Pursue AGI in a **Scalable** Way

Improving Intelligence Level Drives “Model as an Application”

MiniMax Innovation Roadmap

Enterprise AI Agent Implementation Evolution Path

Phase 1: Cognitive Upgrade

Cognitive Upgrade

-  Managerial cognitive shift
-  Understanding AI capability boundaries
-  Assessing business scenarios
-  Defining ROI (Return on Investment)

Phase 2: Organizational Upgrade

Organizational Upgrade

-  Organization and process adaptation
-  Determining user roles
-  Establishing usage specifications
-  Building a training system

Phase 3: Tool Upgrade

Tool Upgrade

-  Customized capability building
-  Private deployment
-  Internal tool integration
-  Workflow automation

Enterprise AI Agent Implementation Evolution Roadmap

How Agent Interacts with Other Components

Internally How an Agent is working

A classic OpenClaw Architecture

From OpenClaw to MaxClaw

No.	Comparison	OpenClaw	General Agent (e.g., MiniMax Agent / Manus)	MaxClaw
1	Product	Open Source AI Agent Framework	Commercial General Intelligent Agent Product	MiniMax Official Cloud-Hosted Agent
2	Developer	Peter Steinberg (Austria)	MiniMax / Monica Team	MiniMax
3	Launch Date	November 2025	MiniMax Agent: July 2025; Manus: March 2025	February 25, 2026
4	LLM Engine	Support for multiple LLMs (OpenAI / Claude etc.)	MiniMax Agent: M2.5; Manus: Multiple models MiniMax Agent: M2.5; Manus: Multiple models	MiniMax M2.5 MiniMax M2.5
5	Tools & Skills	25 tools + 53 skills (Markdown-defined)	MiniMax: MCP Ecosystem Integration; Manus: 40+ scenario skills	Inherits OpenClaw + Built-in Image/Video/Image Search etc.
6	Deployment Mode	Self-hosted (Requires server / Docker)	Cloud-running (No deployment needed)	Cloud-based One-click Deployment (No VPS / Docker needed)
7	Communication Channels	Telegram / Discord / Slack	Multi-platform Integration	Telegram / WhatsApp / Slack / Discord
8	Applicable Scenarios	Deep Customization for Technical Staff	Enterprise Automation / Personal Assistant / Deep Research	Quick Deployment for General Users / Personal Assistant
9	Cost	Free (Open Source) + API Fees	Subscription Model	Subscription Model (Includes API Fees)
10	Core Advantages	Open Source Customizability / Highly Flexible	Broad Scenario Coverage / Mature Product	Zero Threshold / 24x7 Online / Ready to Use Out of the Box

MiniMax M2.7 Early Echoes of Self-Evolution

Demo: MiniMax for Coding and Agentic Solutions

Our Internal Use Case: Live production environment debug and launch new PRD

Take Away

1. From Reactive Chatbots to Proactive Agent Ecosystems

The paradigm is shifting from single-turn Q&A to autonomous, multi-step agent systems with planning, reasoning, and tool-use capabilities — redefining human-AI collaboration.

2. Product Evolution: OpenClaw → MaxClaw

Scalable agent orchestration demands purpose-built frameworks. MaxClaw demonstrates how production-grade multi-agent architectures must evolve beyond generic patterns to handle real-world complexity and reliability.

3. Self-Evolution as an Emergent Capability

MiniMax M2.7 exhibits early echoes of self-evolution — models that can improve their own training and inference pipelines signal a fundamental inflection point toward recursive self-improvement in AI systems.

4. Full-Stack AI: The MiniMax Approach

End-to-end ownership from infrastructure through foundation models to applications (Hailuo AI, Talkie, Open Platform) creates tight feedback loops between research and production — accelerating the path from model intelligence to real-world impact.

5. "Model as Application" — The Convergence Ahead

As model intelligence scales, the boundary between model and application dissolves. The future belongs to AI-native ecosystems where agents are not tools to be called, but autonomous co-workers that learn, adapt, and act.

Thanks!
