Power Every Smart Device with Intelligence

Chenzhe Jing

ModelBest & OpenBMB

Era 1.0

Cloud Capability Accumulation

Implement legal LLMs

Era 2.0

World-Class Edge Intelligence

Deploy across smartphone & smart vehicle scenarios

Era 3.0

Perception & Action Capability Explosion

Pioneering General Embodied Intelligence

All-in on LLMs R&D
Initiated the Zhiyuan
Wudao LLMs Project

Released a 100B-parameter model
at GPT-3.5-level performance
State-of-the-Art Logical Reasoning
Capabilities

Among the earliest in China to
participate in AI-assisted
judicial trials

Focus on Edge Models
Global Premiere of On-Device
General Base Model

Automotive & Smartphone Business
Scaled Rapidly
In-depth Cooperation with Top Global &
Domestic Manufacturers

Global Premiere of
Edge Full-Duplex Omnimodal Model
Global Premiere of
Edge Long-Context Model

OpenBMB | The AI Community of Edge General Foundation Models

OpenClaw & EdgeClaw — Edge-First AI Agents

01

The On-Device Model: What We See and Know

Privacy

Data remains on-device, ensuring the highest level of personal information protection

Real-time

Always-on standby to meet your intelligent needs around the clock

Reliability

Constantly available and functional without being limited by network connectivity

「Moore's Law」

Circuit Density doubles every 18 months.

The Densing Law | Building the Foundation for AGI

PART 01 / Technical Direction

MiniCPM & MiniCPM-o Model Family

MiniCPM | Edge Foundation Model Family, SOTA at Release

MiniCPM Model Series

14 releases – 14 SOTA results

28,000,000+ Downloads

120,000+ Stars¹

[1] Data as of April 2026. Rankings are based on GitHub and Hugging Face. Stars and downloads aggregate data across the four platforms shown.

MiniCPM – o | World's First Full-Duplex Omnimodal Model

SOTA Multimodal Performance — Listening, Seeing, Speaking, and Acting in Real Time

- A 9B-parameter model achieving SOTA performance across modalities, including vision understanding, document parsing, speech understanding and generation, and voice cloning.

Next-Generation Architecture | Active Perception–Decision–Action Loop

Traditional Single-/Half-Duplex Multimodal Models

Passive interaction timing

- No autonomous interaction, turn-taking controlled externally

Blocked input/output

- One-way information flow, cannot process input and output simultaneously

Fragmented modality understanding

- Modalities handled separately, lacking unified processing

MiniCPM–o4.5

Full-Duplex Streaming

Millisecond-level synchronization of input and output

Continuous environmental perception

Real-time strategy adaptation

Proactive Interaction

Human-like interruption handling process user input without cutting off current output

Proactive responses based on context and long-term signals

Low latency without reliance on external tool pipelines

MiniCPM - o | Unlock Promising Potential for Embodied Brain

Full Coverage of the Automotive Ecosystem

Qualcomm

Chip Adaptation: Strategic partnership
with Qualcomm

Seamless cross-generation chip adaptation

Automation Certification: ASPICE L2

The first Chinese model provider with
automotive-grade certification

Ecosystem Partnerships: Full-stack
engineering across the value chain

Partnerships with **dozens** of Tier-1 suppliers

MiniCPM-o in the Future | Embodied Intelligence Technology Outlook

GOSIM Paris 2026

Omni Model

Ⓐ Omnimodal, full-duplex interaction as the foundation of general intelligence

- ➡ **Full-duplex** interaction enables real-time understanding and generation
- ⚙️ **Multimodality** drives unified **cross-modal understanding** of the physical world

VA Model (Video Action)

- Ⓑ A unified architecture as the core pivot for **transferable capabilities**
- Ⓒ Video-generated world models as the **most scalable data source**

Industry Validation

World Action Model Released

- ✓ **2× improvement** in generalization to new tasks and environments (vs. prior VLA)
- ✓ Adaptation to new embodiments **within ~30 minutes** of data

ModelBest Technology Roadmap

Traditional Approach: VLA

Non-streaming multimodal VLM
+ action decoder

- ✗ Limited foundation model capabilities
- ✗ Locked in narrow, closed scenarios with poor data scalability

ModelBest: Omni+VA

Real-time streaming Omni
+ VA Model

- ✓ Closer to the essence of AGI
- ✓ Scalable Data Generation via VA Models

04

OpenClaw & EdgeClaw — Edge-First AI Agents

OpenClaw | The Lobster Way — Your Personal AI on Any OS

The Agent OS for AI Workflows

A self-hosted, always-on gateway that turns chat apps into an execution interface for AI agents.

FROM CHAT → CONTROL PLANE → AUTONOMOUS WORK

1 Multi-channel command center

WhatsApp, Telegram, Slack, Discord, Teams, WeChat, iMessage and more — one gateway, many surfaces.

2 Agent-native execution

Routes tasks into coding agents, tools, shell, browser, files, sessions, memory and multi-agent workspaces.

3 Local-first control

Runs on user hardware / server: data, context and skills remain under the operator's control.

REVOLUTIONARY IMPACT

OpenClaw changes AI from “answer generator” to “delegated worker” — reachable from the apps people already use, able to remember context, coordinate tools, and complete real tasks.

Always-on

Background tasks, reminders, scheduled workflows and proactive agent loops.

Composable

Skills + plugins let users extend agents beyond a single app or vendor wall.

Human-in-the-loop

Chat remains the control surface; approvals and pairing manage risky actions.

GLOBAL MOMENTUM

Reported 247K+ GitHub stars by Mar 2026

Recognized by NVIDIA NemoClaw as “the operating system for personal AI”
Media coverage describes rapid adoption in Silicon Valley and China’s “lobster” agent boom

EdgeClaw | The First Truly Secure Lock for AI Agents

EdgeClaw Box is the first integrated hardware-software cloud-edge AI Agent platform launched by ModelBest.

Edge-side All-in-one Machine

Plug-and-play, no cloud connection required, independent local operation

AI Agent Platform

Based on the EdgeClaw framework, supporting multi-agent collaboration

Enterprise Security Kernel

Three-tier privacy routing + dual-track memory, zero data leakage

Powered by MiniCPM

Tsinghua-originated edge-side models, local inference, zero token costs

1st

The 1st Integrated Hardware-Software Trusted AI Agent Infrastructure for Enterprises

24M+

Cumulative Global Downloads of MiniCPM

100%

Data Localization, Zero Cloud Uploads

0

0 Cloud Token Consumption in full local model mode
