About Ingora

Ingora is an AI education company dedicated to building the most trusted AI companions for children's growth.

Inquiry

The spirit of
curiosity and inquiry

Agora

The power of
sharing and growing
together

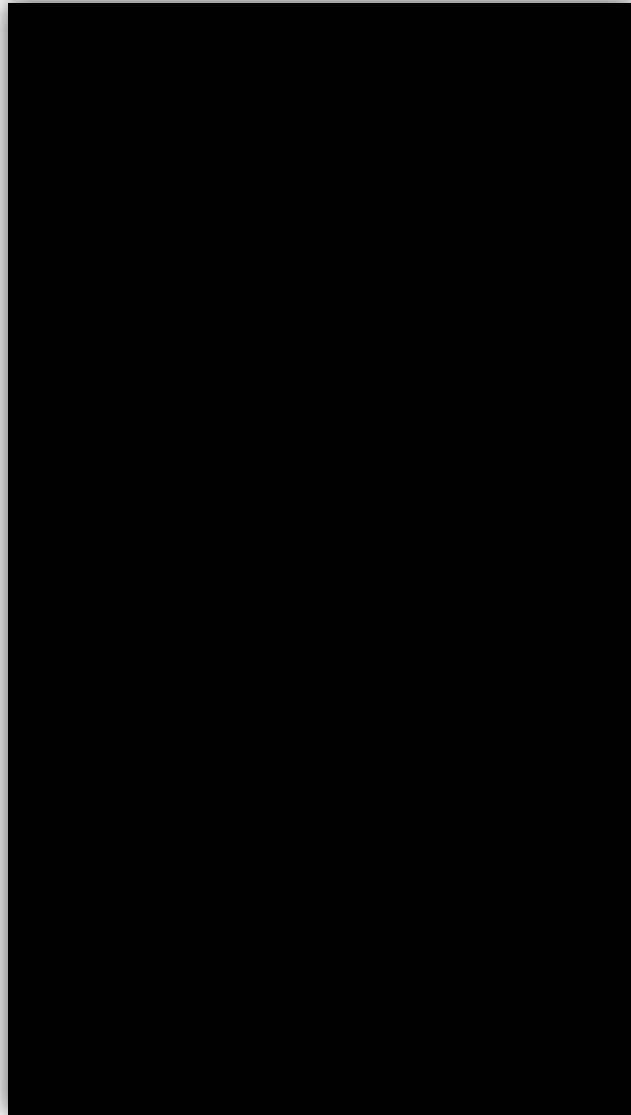

Ingora

Where curious minds
come together to learn,
explore, and grow

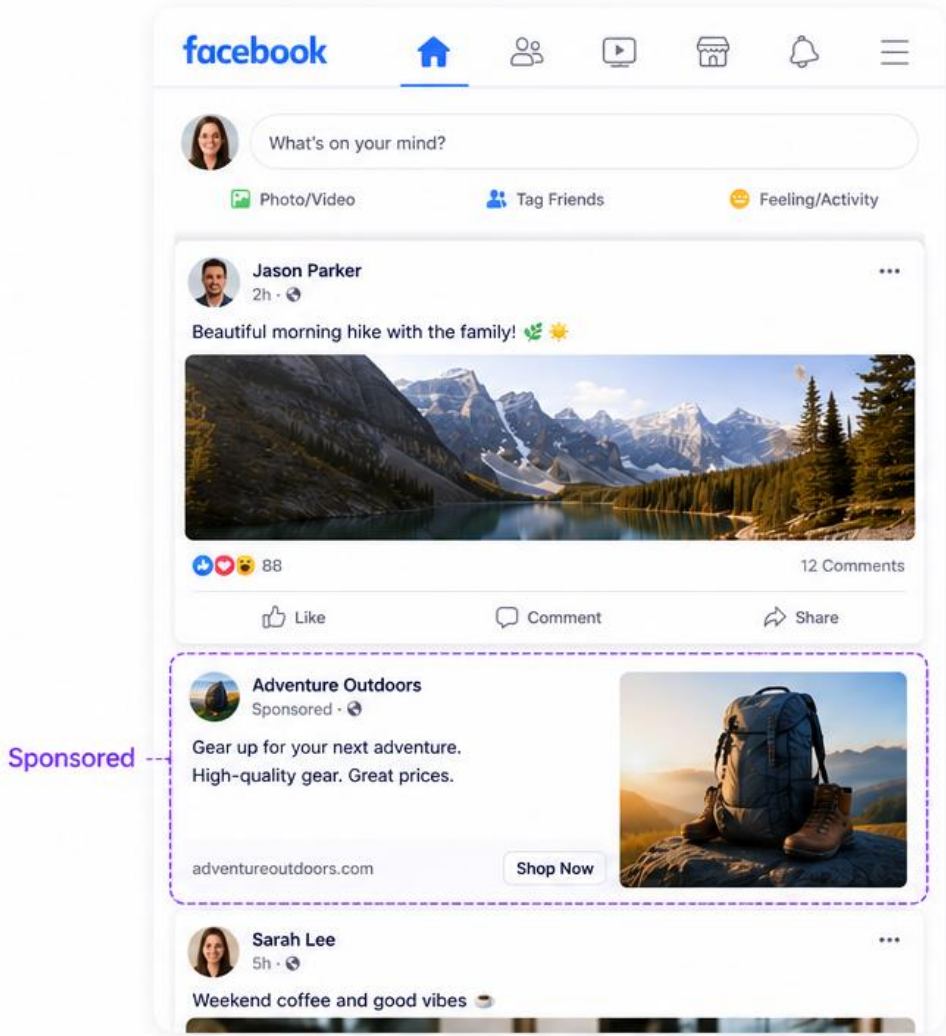

02

Learning Companion

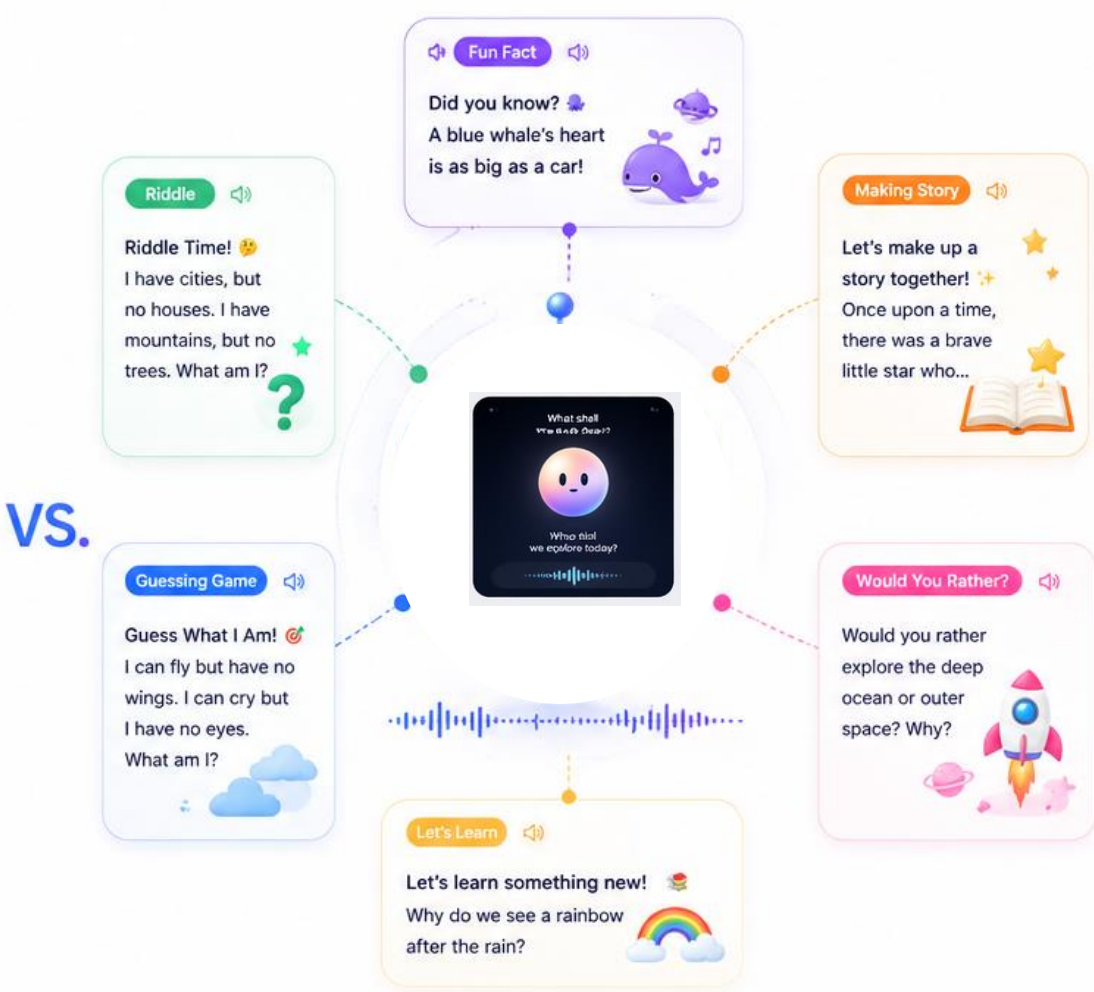

Traditional Facebook Feed + Ad

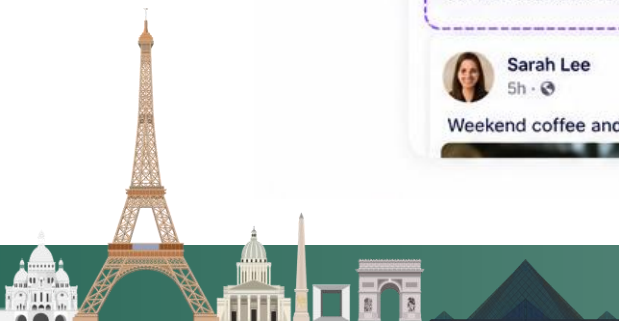

Traditional Ad Placement

Conversation Feed (Voice-Only) for Kids

Growth-Focused Recommendations for Kids

03

Architecture

1 Layer 1: Index Layer (MEMORY.md)

- Always loaded, always < 200 lines
- Each line is a pointer to a detailed topic file
- Database-like B-tree index
- Updated only after successful operations (to prevent contamination)

Example: MEMORY.md

```
# MEMORY.md - Nora's Memory Index
## Profile -> memory/nora-profile.md
- Name: Nora (Chinese: 诺拉)
- Age: 7.5 years old (Born 2018/07)
- School: WISS International School

## Learning Progress -> memory/learning-progress.md
- Current Course: Kid's Box 3
- Recently Mastered: Simple Past Tense
- To Improve: Adverbs of Frequency

## Preferences -> memory/preferences.md
- Likes: Dinosaurs, Science, Adventure Stories
- Dislikes: Princesses, Pink, Repetitive Practice

## Growth Memories -> memory/growth-memories.md
- [2026-03-15] First time writing an English essay independently
- [2026-04-01] Learned the word "excited"
```

Load on Demand

2 Layer 2: Topic Layer (Topic Files)

- Detailed memories organized by topic
- Loaded only when needed (lazy loading)
- Supports incremental updates
- Each topic file is independent, avoiding single point of failure

File Structure: memory/

```
memory/
├── nora-profile.md           # Profile
├── learning-progress.md      # Learning Progress
├── preferences.md           # Preferences
├── growth-memories.md       # Growth Memories
├── conversations/          # Important Conversations
│   ├── 2026-03-15-first-essay.md
│   └── 2026-04-01-excited-word.md
├── weekly-reports/         # Weekly Reports
│   ├── 2026-W13.md
│   └── 2026-W14.md
```

Persistent Storage

3 Layer 3: Session Layer (Session State)

- Temporary state for the current session
- Storage: Memory + Daily Notes
- TTL: Session lifetime
- Merge Strategy: Selectively merge to Layer 1/2 at the end of session

Session State Includes:

- Current conversation context (last 20 turns)
- Current task status (ongoing quiz/story)
- Pending confirmations (memory updates need verification)

Wonder Knowledge

搜索实体、主题或关键词

聚焦

QRIO MEMORY TRACE

身体里的化学 有什么有趣的地方?

Qrio 先命中核心记忆，再沿图谱扩展关联知识，最后生成回答和主动话题。

STEP 1

先找核心记忆

目标是先拿到最接近问题的 episode 或 fact。

- #1768 - 唾液有什么用?
- #1770 - 为什么人会放屁?
- #1779 - 为什么有的人晕车?

STEP 2

再查关联信息

把一条记忆扩成一个小知识网，而不是孤立的一句话。

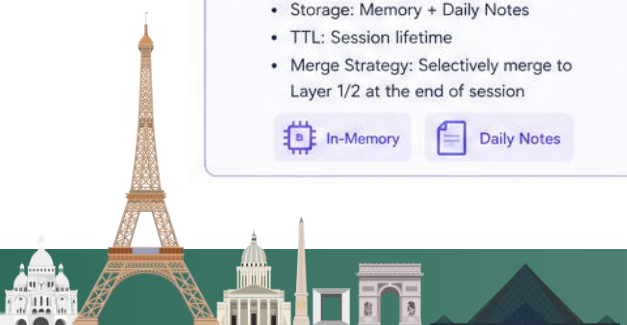

- 化学与环境
- 食物中的化学
- 厨房里的化学
- 化学与艺术
- 化学在工业中的应用
- 化学与医药
- 化学史趣闻
- 奇怪的化学物质
