Program Manager, Development Tools

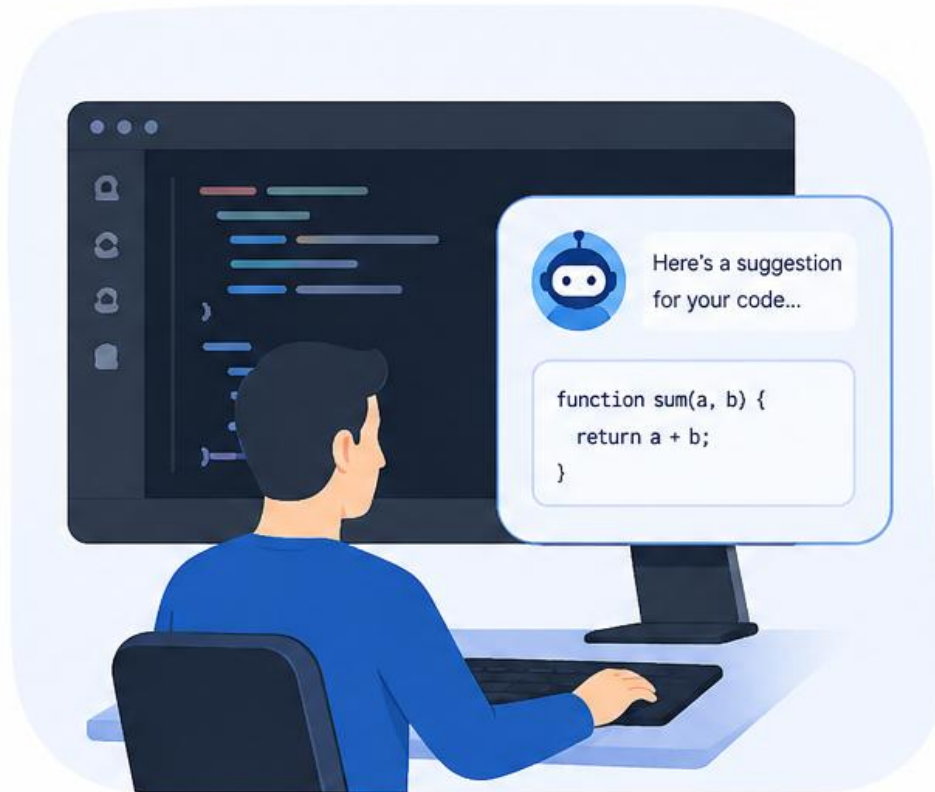

Who Controls Your Agents? Building Vendor-Neutral Infrastructure for Agentic Developer Tools

ASSISTANTS

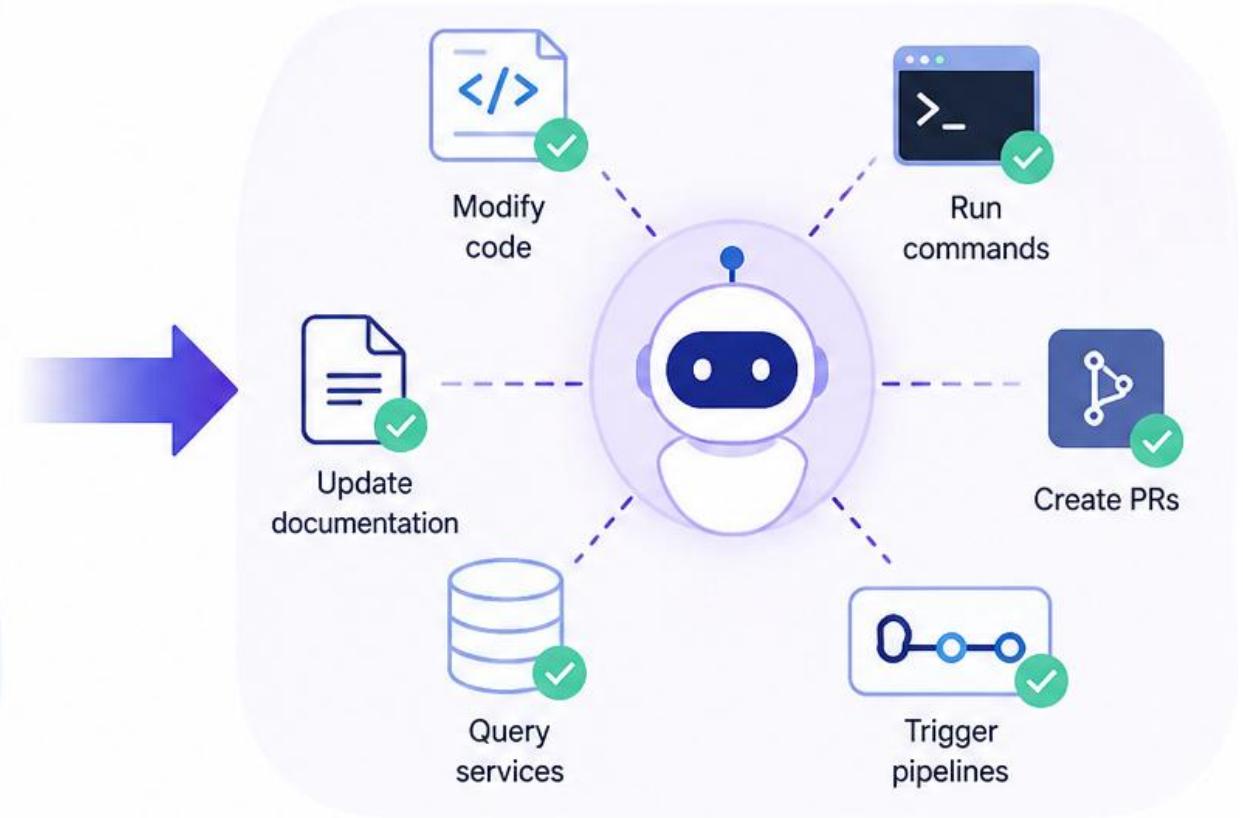

Help developers

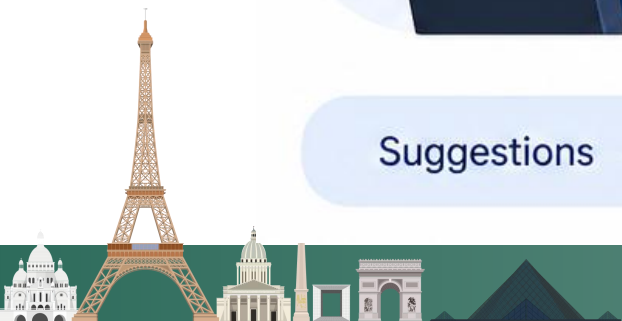

Suggestions • Context-aware • Passive

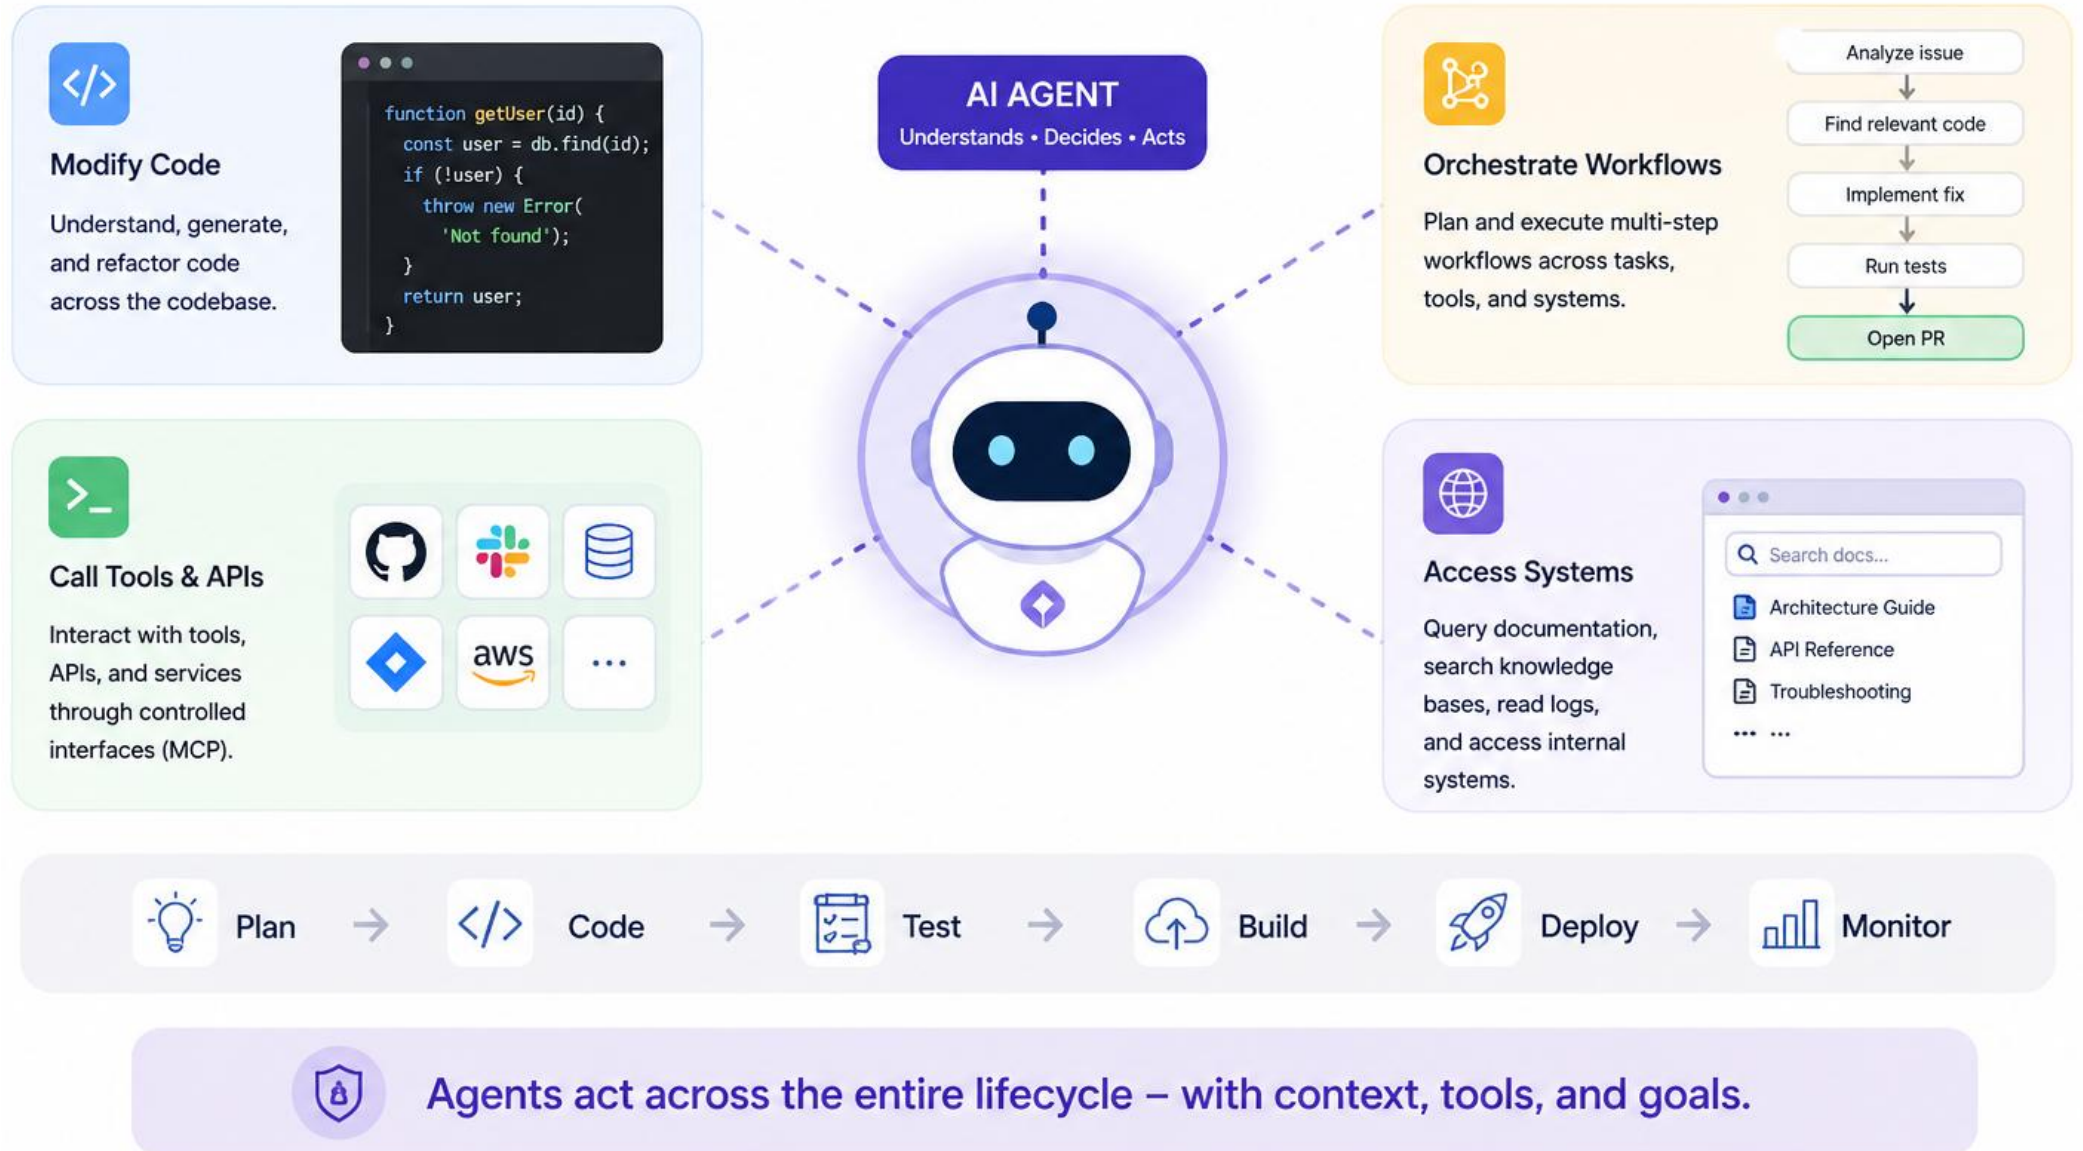

AGENTS

Act on behalf of developers

Actions • Autonomy • Outcomes

Modify code

Understand, generate and refactor code.

Call tools & APIs

Interact with tools, APIs and services.

Orchestrate workflows

Plan and execute multi-step tasks across systems.

1

Where does my code go?

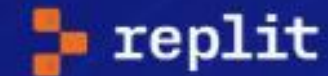

2

What am I pulling in without knowing it?

Powerful — but only if you have visibility and control.

Security and Compliance

Adaptability and Customizability

Vendor Lock-In

Innovation

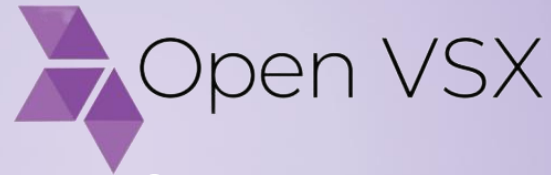

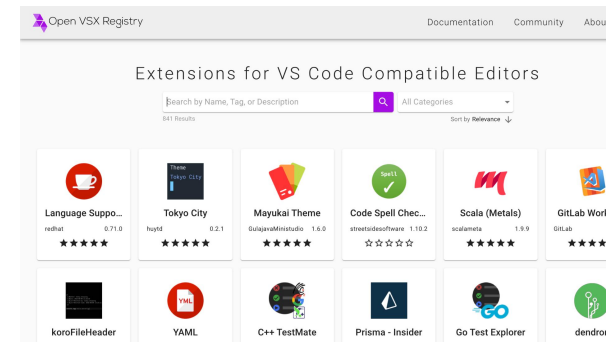

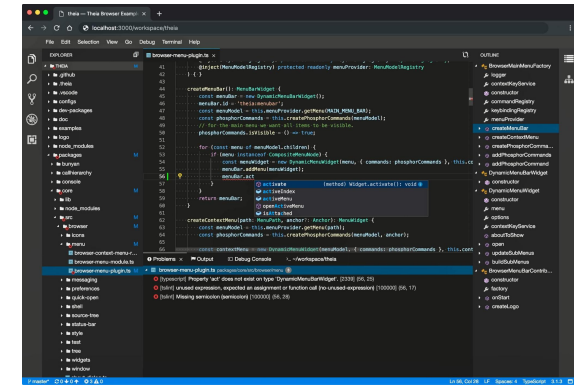

AI and Web-Native Open Source platform
Developer experience competing with VS Code

Rely on

An Open Distribution Model for VS Code Extensions
Compatibility with VS Code leading extensibility format

For
End Users

[Theia IDE](#) = Browser and Desktop based IDE

[AI-powered Theia IDE](#) = AI capabilities of Theia IDE

For
Tool
Builders

[Eclipse Theia](#) = Platform to develop IDE-like tools & products

Star 21,488 Fork 2,818

[Theia AI](#) = AI components of the Theia Platform

Widely adopted alternative to the Microsoft marketplace **GOSIM Paris 2026**

95k+ extensions in the VS Code Marketplace

~75% of developers use Visual Studio Code

Marketplace terms restrict broader ecosystem reuse

12,500+ extensions available, 300M+ downloads per month, used by thousands of tools

Includes top 100 open source VS Code extensions,

Public hosted service (open-vsx.org) or self-hosted

Marketplace operated by Microsoft

VS Code extension model widely adopted as the default extension mechanism

Usage restricted to VS Code-based products

Visual Studio Code

Open VSX

Open marketplace hosted by the Eclipse Foundation

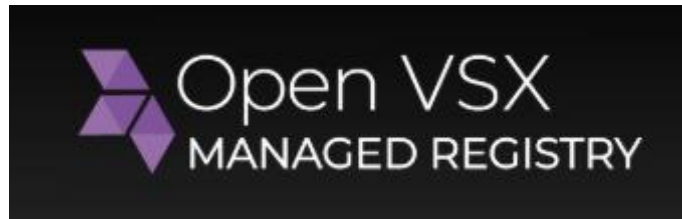

Fully compatible with VS Code extension standard

Supports both VS Code and Non VS Code-based products

**VS Code extensions have become a standard for extensibility.
Open VSX enables broader, vendor-neutral access to that standard**

Defined tiers

Aligned to sustained request-per-sec consumption

Low-latency

EU-based, multi-regional infrastructure

IBA

Control + usage dashboard

Vendor-neutral

Governance under EF

99.95%

SLA

24/7

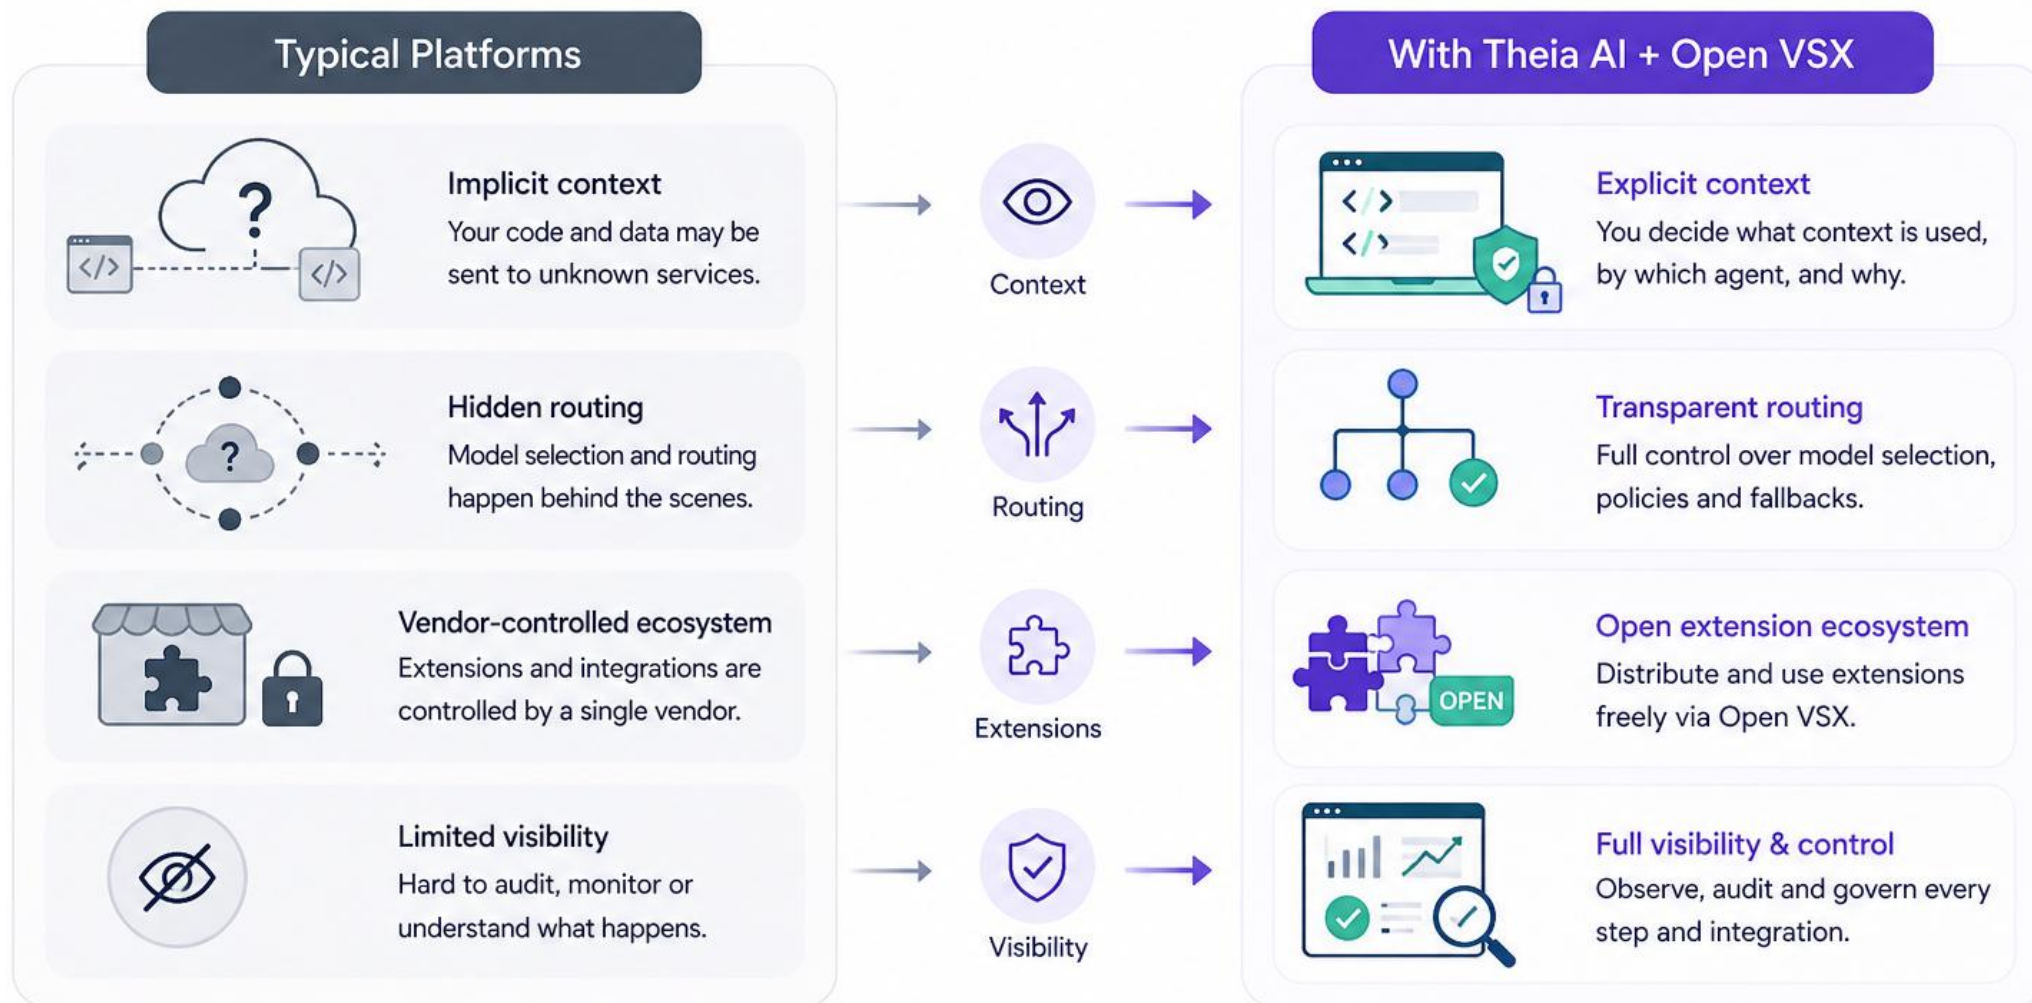

Monitoring & tier-based incident response

Capacity planning

High-volume automated workloads

This isn't just about features. It's about control.

You stay in control of your agents, your data, and your developers' experience.

Air-gapped Deployments

Keep your code and data in your environment.

- ✓ Run locally or in your private infrastructure
- ✓ No external calls, no data leakage
- ✓ Full control for regulated environments

Custom Domain-Specific Agents

Build agents that understand your tools, processes, and domain.

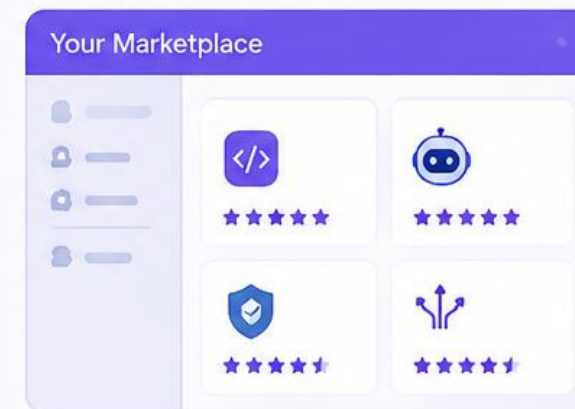

- ✓ Leverage your internal knowledge
- ✓ Integrate with your tools and data
- ✓ Deliver higher value, faster

Internal Extension Marketplaces

Distribute, govern, and discover extensions on your terms.

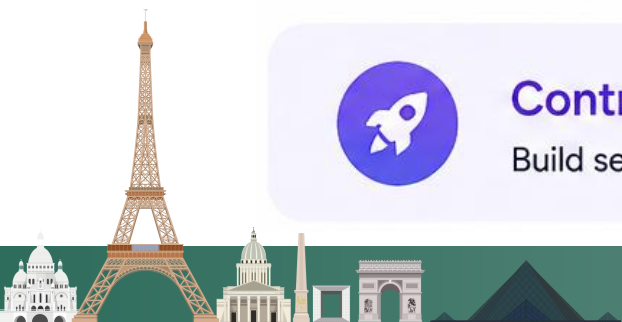

- ✓ Curate and approve what's available
- ✓ Ensure security and compliance
- ✓ Empower your developer community

Control creates flexibility.

Build securely. Adapt continuously. Innovate freely.

1

Control the runtime

Control how agents **run**

2

Control ecosystem

Control how capabilities
are **distributed**

3

• Treat AI as
infrastructure

And **not** just a feature..
